SUMMARY

Senior AI Product Manager with 10+ years of delivering measurable business outcomes across AI/ML platforms, API ecosystems, and enterprise SaaS products. Known for owning the full product lifecycle — from zero-to-one roadmaps to scaled platform growth — and for translating ambiguous technical opportunities into focused, high-impact strategies. Track record includes driving a 25% revenue growth initiative at CargoSprint, scaling an enterprise platform to 3 new customers at Accelya, and shipping Trust & Safety ML systems at Twitter. Thrives at the intersection of engineering depth and business acumen, consistently aligning cross-functional teams — including ML engineers, data scientists, and C-suite stakeholders — around a clear product vision. Bilingual (English/Spanish), MSc in Telecommunications Engineering.

EXPERIENCE

CargoSprint, Senior Product Manager – AI Platform

Jul 2025 - Present

- Spearheading a company-wide AI transformation strategy targeting 25% revenue growth — defining the product vision, prioritization framework, and go-to-market approach for an LLM-powered cargo network expansion.
- Established the AI product roadmap from the ground up, identifying the highest-leverage use cases (intelligent shipment routing, predictive analytics, API-first automation) and sequencing delivery against OKRs.
- Set the standard for how AI features are scoped and measured — defining model KPIs, evaluation criteria, and production monitoring protocols adopted across the engineering org.
- Aligned engineering, data science, and executive stakeholders around a unified AI product vision, reducing prioritization conflict and accelerating time-to-market on key initiatives.

Accelya Group, Senior Product Owner / Product Manager – Platform

Dec 2022 - Jun 2025

- Grew the enterprise customer base by 3 net-new accounts by identifying platform gaps, leading API integration enhancements, and partnering with Sales to shape a compelling product narrative.
- Sustained a delivery rate of 8+ features per release cycle across a SAFe program, improving velocity without sacrificing quality — achieved by restructuring backlog grooming and tightening Definition of Done.
- Introduced product KPI frameworks and analytics dashboards that shifted team decision-making from opinion-driven to data-driven, directly influencing roadmap prioritization for two consecutive quarters.
- Defined ML feature requirements and model evaluation criteria in partnership with data teams, bridging the gap between algorithmic capability and real-world airline distribution use cases.

Twitter, Product Operations Manager – AI/ML

May 2022 - Dec 2022

- Shipped ML-powered Trust & Safety systems on AWS — including content moderation, spam detection, and safety classifiers — that meaningfully reduced harmful content exposure at platform scale.
- Translated complex user safety requirements into precise model specs, evaluation rubrics, and launch readiness criteria, enabling faster iteration between data science and policy teams.
- Established production ML monitoring benchmarks that gave the team early-warning signals on model drift, improving response time to safety incidents.

UKG (Ultimate Kronos Group), Product Manager – API Integration

Sep 2020 - May 2022

- Successfully delivered 10+ enterprise HR product implementations on time — establishing repeatable onboarding playbooks that reduced scoping-to-launch cycle time across the portfolio.
- Became the go-to escalation owner for multi-vendor SAML/SSO integration failures, resolving critical blockers that had stalled enterprise deals and restoring customer confidence.

- Improved cross-team release predictability by introducing structured acceptance criteria and capacity-aware sprint planning, reducing last-minute scope changes by the team.

*Accelya Group, **Product Manager – Customer Roadmap***

Jun 2019 - Sep 2020

- Owned the airline distribution product roadmap for API engines serving GDS agencies and e-commerce platforms globally, directly influencing revenue-generating distribution channels.

- Launched MFA and a personalized airline partner portal that streamlined partner onboarding — cutting setup friction and increasing partner retention across the customer base.

- Introduced conditional pricing logic into the API engine, enabling airline partners to offer dynamic, context-aware fares that improved booking conversion rates.

*PowerPlan, Inc., **Product Consultant***

Mar 2018 - Jun 2019

- Delivered \$200,000+ in end-to-end project implementations with zero escalations to executive leadership — a result of rigorous scoping, clear stakeholder communication, and proactive risk management.

- Designed ERP-to-local server integration scripts that eliminated manual reconciliation processes, reducing data errors and operational overhead for clients post-launch.

*Manhattan Associates, **Senior Software Consultant***

Jun 2015 - Mar 2018

- Drove SDLC implementations for Fortune 500 supply chain clients from design through go-live, earning repeat engagement from key accounts by consistently delivering on scope and timeline.

- Advised enterprise clients on supply chain process optimization, translating operational pain points into system requirements that guided configuration and customization decisions.

EDUCATION

Universitat Politècnica de València (UPV)

*Master of Science • **Telecommunications Engineering***

Universitat Politècnica de València (UPV)

*Bachelor of Science • **Telecommunications Engineering***

LICENSES & CERTIFICATIONS

Certified Scrum Master (CSM)

SAFe POPM (Product Owner/Product Manager)

SKILLS

AI/ML Product Strategy • Generative AI & LLMs • Agentic AI Platforms • API Platform Development • Data-Driven Roadmapping • ML Model Lifecycle • SAFe Agile & Scrum • Cross-Functional Leadership • Executive Stakeholder Alignment • Enterprise SaaS & B2B
